ING5 Polyclonal antibody Catalog Number: 10665-1-AP Featured Product

Featured Product

28 Publications

Basic Information	Catalog Number: 10665-1-AP	GenBank Accession Number BC005370	: Purification Method: Antigen affinity purification
	Size:	GenelD (NCBI):	Recommended Dilutions:
	150ul , Concentration: 500 ug/ml by	84289	WB 1:500-1:1000
	Nanodrop and 207 ug/ml by Bradford	UNIPROT ID:	IP 0.5-4.0 ug for 1.0-3.0 mg of total
	method using BSA as the standard;	Q8WYH8	protein lysate IHC 1:20-1:200
	Source: Rabbit	Full Name: inhibitor of growth family, n	
	Isotype: Calculated MW:		
	lgG	28 kDa	
	Immunogen Catalog Number: AG1059	Observed MW: 28-32 kDa	
Applications	Tested Applications:	Posit	tive Controls:
	WB, IP, IHC, ELISA Cited Applications:	WB : 293 (Jurkat cells, PC-3 cells, mouse kidney tissue, HEI cells
	WB, IHC, IF	IP:H	IEK-293 cells,
	Species Specificity: human, mouse, rat	IHC : tissu	human colon cancer tissue, human ovary tumor
	Cited Species:	(1550	e
	human, mouse, rat		
	Note-IHC: suggested antigen r TE buffer pH 9.0; (*) Alternativ retrieval may be performed w buffer pH 6.0	vely, antigen	
	ING5, also named as p28ING5, belongs to the ING family. It is a component of the HBO1 complex which has a histone H4-specific acetyltransferase activity, a reduced activity toward histone H3 and is responsible for the bulk of histone H4 acetylation in vivo. ING5 is a component of the MOZ/MORF complex which has a histone H3 acetyltransferase activity. Through chromatin acetylation it may regulate DNA replication and may function as a transcriptional coactivator. (PMID:12750254) Altered ING5 expression and its shift into the cytoplasm may have an impact on the malignant transformation of colorectal epithelial cells and should be considered as a biomarker for colorectal carcinogenesis. (PMID:21193223)		
Background Information	histone H4-specific acetyltransferase histone H4 acetylation in vivo. ING5 acetyltransferase activity. Through cl transcriptional coactivator. (PMID:127 impact on the malignant transformat	activity, a reduced activity to s a component of the MOZ/M nomatin acetylation it may n 750254) Altered ING5 express ion of colorectal epithelial ce	oward histone H3 and is responsible for the bulk of ORF complex which has a histone H3 egulate DNA replication and may function as a ion and its shift into the cytoplasm may have an
	histone H4-specific acetyltransferase histone H4 acetylation in vivo. ING5 acetyltransferase activity. Through ch transcriptional coactivator. (PMID:127 impact on the malignant transformat colorectal carcinogenesis. Group brand and is not available to purchase from any other manufacturer.

Selected Validation Data

WB result of ING5 antibody (10665-1-AP; 1:5000; incubated at room temperature for 1.5 hours) with sh-Control and sh-ING5 transfected Jurkat cells.

Jurkat cells were subjected to SDS PAGE followed by western blot with 10665-1-AP (ING5 antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffinembedded human colon cancer using 10665-1-AP (ING5 antibody) at dilution of 1:100 (under 25x lens).

IP result of anti-ING5 (IP:10665-1-AP, 4ug; Detection:10665-1-AP 1:700) with HEK-293 cells lysate 2560ug.
