Background Information

SFTPC (surfactant protein C), also named as SFTP2, SP5 and SP-C, is a pulmonary surfactant associated proteins promote alveolar stability by lowering the surface tension at the air-liquid interface in the peripheral air spaces. Defects in SFTPC are the cause of pulmonary surfactant metabolism dysfunction type 2 (SMDP2). Genetic variations in SFTPC are associated with respiratory distress syndrome in premature infants (RDS). Two isoforms of the human protein are produced by alternative splicing. One previous study reported that SFTPC deletion was observed in NSCLC tissues, implying that SFTPC downregulation might be involved in the progression of lung cancer.
