## Background Information

Profilin-1 (PFN1) plays an important role in the control of actin dynamics, and could represent an important therapeutic target in several diseases. PFN1 is identified as a huntingtin aggregation inhibitor, and may serve as a tumor-suppressor. PFN1 is crucial for the conversion of monomeric (G)-actin to filamentous (F)-actin. Amyotrophic lateral sclerosis (ALS) is a late-onset neurodegenerative disorder resulting from motor neuron death. Cells expressing PFN1 mutants contain ubiquitinated, insoluble aggregates that in many cases contain the ALS-associated protein TDP-43. Recently, PFN1 is a potential biomarker for bladder cancer aggressiveness and may be of great clinical importance.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 11680-1-AP (Profilin 1 antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffin-embedded human normal colon slide using 11680-1-AP (Profilin 1 antibody) at dilution of 1:400 (under 20x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

HAP1 (WT and PFN1 KO) lysates prepared with NP-40 buffer, 50 µg protein loaded. 11680-1-AP incubated at 1:6000 at 4°C overnight in 5% milk in TBST. Ponceau stained transfers shown on right.
