Background Information

EMG1, also named as NEP1, is a highly conserved protein initially identified as "Essential for Mitotic Growth" in yeast. EMG1 is required for maturation of the 18S rRNA and biogenesis of the 40S ribosomal subunit. EMG1 is the methyltransferase in the biosynthesis of m1acp3-Psi in eukaryotic 18S rRNAs. It has an essential role in 40S ribosomal subunit biogenesis independent on its methyltransferase activity. A mutation in human EMG1 gene causes Bowen-Conradi syndrome (BCS), an autosomal recessive disorder characterized by severely impaired prenatal and postnatal growth, profound psychomotor retardation, and death in early childhood.
