## **Background Information**

 $P-selectin, also known as \,GMP140 \,or \,CD62P, is \,a \,transmembrane \,glycoprotein \,that \,mediates \,the \,interaction \,of \,also \,also$ activated endothelial cells or platelets with leukocytes. It is an adhesion molecule involved in the pathogenesis of inflammation, thrombosis, and oncogenesis. P-selectin is stored in the alpha-granules of platelets and Weibel-Palade bodies of endothelial cells. Upon cell activation by agonists, P-selectin is transported rapidly to the cell
