Background Information

Cyclic AMP-responsive element-binding protein 3-like protein 2 (CREB3L2), also named BBF2H7, is a transcriptional activator which is activated during endoplasmic reticulum (ER) stress late phase. It has 3 isoforms produced by alternative splicing. CREB3L2 exerts protective effect in neurons by regulation of unfolded protein response (UPR)dependent gene transcriptions. N-terminal cytoplamic domain of CREB3L2 is cleaved under ER stress and then translocates to the nucleus. Catalog#14514-1-AP is a rabbit polyclonal antibody raised against N-terminal (1-247aa) of human CREB3L2.
