	LATS2, also named as KPM, belongs to the protein kinase superfamily and AGC Ser/Thr protein kinase family. LATS is a tumor suppressor which plays a critical role in centrosome duplication, maintenance of mitotic fidelity and genomic stability. It negatively regulates G1/S transition by down-regulating cyclin E/CDK2 kinase activity. It is a negative regulator of the androgen receptor. LATS2 has a calculated molecular mass of 120 kDa and an apparent molecular mass of 150 kDa (PMID: 10871863). The antibody is specific to LATS2.
