Background Information

SEC23-interacting protein (SEC23IP), also known as p125, is a member of the phosphatidic acid preferring-phospholipase A1 family. SEC23IP interacts with Sec23, a coat component of COPII vesicles which are involved in protein export from the endoplasmic reticulum (ER). SEC23IP localizes to ER exit sites and participates in the organization of this compartment (PMID: 15623529). It may have a role in the early stage of the secretory pathway (PMID: 10400679).
