Background Information

IAPP, also known as Amylin, is commonly found in pancreatic islets of patients suffering diabetes mellitus type II, or harboring a tumor of the pancreas that is derived from beta cells and secretes INS. IAPP is co-secreted with INS by $pancreatic \, \beta \text{-cells and largely contributes to glycemic control.} \, Studies \, suggest \, that \, this \, protein, like \, the \, related \, relate$ beta-amyloid (Abeta) associated with Alzheimer's disease, can induce apoptotic cell-death in particular cultured cells, an effect that may be relevant to the development of type II diabetes.
