Background Information

CD23, also known as low affinity immunoglobulin epsilon Fc receptor, is a transmembrane glycoprotein present on $a\ subpopulation\ of\ B\ lymphocytes\ in\ germinal\ centres,\ EBV-transformed\ B-lymphoblastoid\ cell\ lines,\ follicular$ dendritic cells, and a subpopulation of peripheral blood cells. CD23 has essential roles in the regulation of IgE production and in the differentiation of B-cells. And the antibody is conjugated with CL594, Ex/Em 593 nm/614 nm.
