Background Information

INS is a peptide hormone, produced by beta cells of the pancreas, and is central to regulating carbohydrate and fat metabolism in the body. It participates in glucose utilization, protein synthesis and in the formation and storage of neutral lipids. It is synthesized as a precursor molecule, which is processed prior to secretion. A- and B-peptides are joined together by a disulfide bond to form INS, while the central portion of the precursor molecule is cleaved and released as the C-peptide. Defects in INS results in type 1 diabetes mellitus. INS may also exist 36 kDa form corresponding to the hexameric INS form.

Selected Validation Data

Immunofluorescent analysis of (4% PFA) fixed mouse pancreas tissue using the CoraLite®594-conjugated version of this antibody, CL594-66198 (INS antibody), at dilution of 1:400. The α cells of pancreas was labelled in green with CL488-67286 (Glucagon antibody).
