Background

SNF2L, also named as SMARCA1, NURF140 and ISWI, encodes the SWI/SNF family of proteins. The encoded protein is an ATPase which is expressed in diverse tissues and contributes to the chromatin remodeling complex that is involved in transcription. SNF2L was shown to promote neurite outgrowth as well as regulate the human engrailed homeotic genes, important regulators of brain development. The protein may also play a role in DNA damage, growth inhibition and apoptosis of cancer cells.
