FOXO3A Polyclonal ANTIBODY

Catalog Number:10849-1-AP

For Research Use Only

Basic Information

Catalog Number: 10849-1-AP

GenBank Accession Number: BC021224

GeneID (NCBI): 2309

Full Name: forkhead box O3

Calculated MW: 673aa, 71 kDa

Observed MW: 72-97 kDa

Recommended Dilutions:
- WB: 1:500-1:2000
- IHC: 1:50-1:200
- IF: 1:10-1:100

Positive Controls:
- WB: Jurkat cells, HeLa cells, PC-3 cells, HEBK-263 cells
- IHC: human breast cancer tissue, human prostate cancer tissue
- IF: HeLa cells, SH-SY5Y cells

Applications

Tested Applications:
- IF, IHC, WB, ELISA

Cited Applications:
- IF, IHC, IP, WB

Species Specificity:
- human, mouse, rat

Cited Species:
- human, mouse, pig, rat

Note: IHC: suggested antigen retrieval with TE buffer pH 9.0; (*) Alternatively, antigen retrieval may be performed with citrate buffer pH 6.0

Background Information

In mammalian cells, FoxO factors act as potent transcriptional activators that upregulate the expression of programs of genes involved in stress resistance, cell cycle arrest, differentiation, apoptosis, autophagy, and metabolism. FOXO3 has a key role in the maintenance of adult neural and hematopoietic stem cells. It also associates with extreme longevity in humans and regulates the homeostasis of adult stem cell pools in mammals, which may contribute to longevity. Phosphorylation inhibits FOXO3 nuclear translocation that is essential for its regulation and function. The calculated molecular weight of FOXO3 is 71 kDa, but some experiments analysis using a FOXO3a specific antibody showed the expression of a 90 kDa fulllength FOXO3a protein (Full) and a 40 kDa processed FOXO3a product (Short). 90 kDa FOXO3a protein is a phosphorylated via activation of PI3K (phosphatidylinositol 3-kinase) and Akt after insulin stimulation, and translocate from the nucleus to the cytoplasm. Storage

Store at -20ºC. Stable for one year after shipment.

Storage Buffer:
PBS with 0.1% sodium azide and 50% glycerol pH 7.3.

Aliquoting is unnecessary for -20ºC storage
