# **Background Information**

LC3, also known as microtubule-associated protein 1 light chain 3 (MAP1LC3), is a mammalian homolog of the yeast Atg8p (autophagy-related 8 protein) that is involved in autophagy process. Three isoforms of LC3 exist as LC3A,LC3B, and LC3C. LC3 is first synthesized as pro-LC3, and undergoes C-terminal cleavage to yield a cytosolic precursor known as LC3-I. During autophagy LC3-I is subsequently conjugated to PE lipid as lipidated form: LC3-II. The lipidated form migrates faster on SDS-PAGE gel. The increased the level of LC3-II has been widely used as autophagy marker. This antibody recognizes both LC3-I (18-20 kDa) and LC3-II (14-16 kDa).

## **Selected Validation Data**

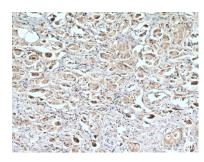

Chloroquine treated HEK-293 cells were subjected to SDS PAGE followed by western blot with 12135-1-AP (LC3 Antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.

Chloroquine treated HeLa cells were subjected to SDS PAGE followed by western blot with 12135-1-AP (LC3 Antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.

Immunofluorescent analysis of starvation treated HEK-293 cells using 12135-1-AP (LC3 Antibody) at dilution of 1:50 and Alexa Fluor 488-conjugated AffiniPure Goat Anti-Rabbit IgG(H+L). Cells were fixed with ethanol at -20 °C. 20 mM chloroquine was used to block the autophagy flux.
