Background Information

TEAD1 belongs to a protein family that share the TEA/ATTS domain. It acts as a transcriptional factor by binding to the GT-IIC and Sph(I 1 II) enhansons in the simian virus 40 (SV40) enhancer. Also it can modulate SV40 late transcription together with large T antigen. The transcriptional activity of TEAD1 required several regions of the proteins , a TBP-associated factors and a limiting transcriptional intermediary factors. TEAD1 also preforms an essential role in the Hippo signaling pathway. TEAD1 regulates gene expression of YAP1 and WWTR1/TAZ, thus mediating cell proliferation, migration and epithelial mesenchymal transition induction. TEAD is preferentially expressed in skeletal muscle. Lower levels in pancreas, placenta, and heart.
