CHD1 Polyclonal antibody

Catalog Number: 20576-1-AP

Basic Information

Catalog Number: 20576-1-AP
Size: 150μl, Concentration: 700 μg/ml by Nanodrop and 327 μg/ml by Bradford method using BSA as the standard
Source: Rabbit
Isotype: IgG

GenBank Accession Number: NM_001270
GeneID (NCBI): 1105
Full Name: chromodomain helicase DNA binding protein 1
Calculated MW: 197 kDa
Observed MW: 200 kDa
Purification Method: Antigen affinity purification
Recommended Dilutions:
WB 1:300-1:1000
IP 0.5-4.0 μg for IP and 1:200-1:1000 for WB

Applications

Tested Applications:
IP, WILEUSA
Cited Applications:
IF, WB
Species Specificity:
human, mouse, rat
Cited Species:
human, mouse

Background Information

CHD1 belongs to the SNF2/RAD54 helicase family. CHD1 is an ATP-dependent chromatin-remodeling factor which functions as a substrate recognition component of the transcription regulatory histone acetylation (HAT) complex SAGA. CHD1 regulates polymerase II transcription. It is required for efficient transcription by RNA polymerase I, and more specifically the polymerase I transcription termination step. CHD1 regulates negatively DNA replication. It is required to maintain a specific chromatin configuration across the genome. It is associated with histone deacetylase (HDAC) activity. CHD1 is required for the bridging of SNF2, the FACT complex, the PAF complex as well as the U2 snRNAP complex to H3K4me3. It functions to modulate the efficiency of pre-mRNA splicing in part through physical bridging of spliceosomal components to H3K4me3. It is required for maintaining open chromatin and pluripotency in embryonic stem cells. In PTEN-deficient prostate and breast cancers, CHD1 depletion profoundly and specifically suppressed cell proliferation, cell survival and tumorigenic potential. The antibody is specific to CHD1.

Storage

Store at -20°C. Stable for one year after shipment.
Storage Buffer:
PBS with 0.02% sodium azide and 50% glycerol pH 7.3.
Aliquoting is unnecessary for -20°C storage
