## **Background Information**

CD3 is a complex of proteins that directly associates with the T cell receptor (TCR). The TCR/CD3 complex of T $lymphocytes\ consists\ of\ either\ a\ TCR\ alpha/beta\ or\ TCR\ gamma/delta\ heterodimer\ coexpressed\ at\ the\ cell\ surface$ with the invariant subunits of CD3 labeled gamma, delta, epsilon, zeta, and eta. The TCR recognizes antigens bound to major histocompatibility complex (MHC) molecules. TCR-mediated peptide-MHC recognition is transmitted to the CD3 complex, leading to the intracellular signal transduction. CD3 is considered to be a pan-T cell marker for detection of normal and neoplastic T cells.
