Background Information

The cytochrome P450 (CYP) family of isoenzymes are involved in the metabolism of diverse endogenous compounds and detoxification of exogenous agents. Cytochrome P450 2S1 (CYP2S1) is one 'orphan' CYP, and is particularly expressed in epithelial cells of tissues which are exposed to the environment such as the skin, respiratory, gastrointestinal, and urinary tracts. CYP2S1 is associated primarily with the synthesis and metabolism of lipids including prostaglandins (PGE2) and retinoids. In addition, CYP2S1 expression is associated with patient survival in breast cancer.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 68198-1-Ig (CYP2S1 antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with HRP-conjugated GAPDH Monoclonal antibody (HRP-60004) as loading control.
