				Background Information	Human TLR2, also known as CD282, is a member of the Toll-like receptor (TLR) family. TLR receptors are type I integral transmembrane glycoproteins which play a fundamental role in pathogen recognition and activation of innate immunity. TLR2 is expressed by immune cells including monocytes/macrophages, polymorphonuclear leukocytes		
					(PMLs) and dendritic cells, and is also cells (PMID: 21428911; 22566960). TL cascade of events leading to significa	expressed by some no-immune c R2 forms heterodimers with TLR1 ant innate immune responses, dev	ells including endothelial and epithelial and TLR6, which is the initial step in a
