For Research Use Only

## CoraLite® Plus 488-conjugated APEX1 Monoclonal antibody

**Purification Method:** 

Protein A purification

Catalog Number: CL488-67781

Featured Product

**Basic Information** 

Catalog Number: GenBank Accession Number:

CL488-67781 BC002338

 Size:
 GeneID (NCBI):
 CloneNo.:

 100ul , Concentration: 1000 ug/ml by 328
 2B10B2

Nanodrop; UNIPROT ID: Excitation/Emission maxima

 Source:
 P27695
 wavelengths:

 Mouse
 Full Name:
 493 nm / 522 nm

Isotype: APEX nuclease (multifunctional DNA

IgG2a repair enzyme) 1
Immunogen Catalog Number: Calculated MW:
AG28552 36 kDa

Observed MW: 36 kDa

**Applications** 

**Tested Applications:** 

FC (Intra)

Species Specificity:

human, mouse, rat, pig, rabbit

## **Background Information**

APEX1, also named as APE, APE1, HAP1 and REF-1, belongs to the DNA repair enzymes AP/ExoA family. It is a multifunctional protein that plays a central role in the cellular response to oxidative stress. The two major activities of APEX1 are in DNA repair and redox regulation of transcriptional factors. APEX nuclease is a DNA repair enzyme having apurinic/apyrimidinic (AP) endonuclease, 3-prime,5-prime-exonuclease, DNA 3-prime repair diesterase, and DNA 3-prime-phosphatase activities. On the other hand, APEX1 also exerts reversible nuclear redox activity to regulate DNA binding affinity and transcriptional activity of transcriptional factors by controlling the redox status of their DNA-binding domain, such as the FOS/JUN AP-1 complex after exposure to IR. APEX1 is involved in calcium-dependent down-regulation of parathyroid hormone (PTH) expression by binding to negative calcium response elements (nCaREs). When acetylated at Lys-6 and Lys-7, APEX1 stimulates the YBX1-mediated MDR1 promoter activity, leading to drug resistance. It also acts as an endoribonuclease involved in the control of single-stranded RNA metabolism. It plays a role in regulating MYC mRNA turnover by preferentially cleaving in between UA and CA dinucleotides of the MYC coding region determinant (CRD). In association with NMD1, APEX1 plays a role in the rRNA quality control process during cell cycle progression.

Storage

Storage:

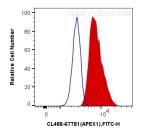

Store at -20°C. Avoid exposure to light. Stable for one year after shipment.

Storage Buffer:

PBS with 50% Glycerol, 0.05% Proclin300, 0.5% BSA, pH 7.3.

Aliquoting is unnecessary for -20°C storage

## Selected Validation Data

1X10^6 NIH/3T3 cells were intracellularly stained with 0.8 ug CoraLite® Plus 488 Anti-Human APEX1 (CL488-67781, Clone:2B10B2) (red), or 0.8 ug Mouse IgG2a Isotype Control (CL488-66360-2, Clone: K11A1B2A2) (blue). Cells were fixed and permeabilized with Transcription Factor Staining Buffer Kit (PF00011).
