

Recombinant Human Wnt3A

Catalog Number: **HZ-1296**

HEK293 expressed

Endotoxin-free

Animal-component free

Technical Specifications

Species	Human
Expression	HEK293
Activity	Typically ≤ 20 ng/mL EC50
Purity	>90%
Endotoxin	<1 EU/ μ g
Molecular Mass	38-42 kDa
Formulation	1x PBS pH 7.4 + 500mM NaCl +1% CHAPS, See Certificate of Analysis for details
Gene ID	89780

The activity was determined by dose-dependent Alkaline Phosphatase production in MC3T3 E1 mouse preosteoblast cells using pNPP as chromogenic substrate and stabilization of beta catenin in mouse L929 cells

Reconstitution Buffer

Briefly centrifuge the vial before opening. It is recommended to reconstitute the protein to $\leq 100\mu$ g/mL in sterile 1x PBS containing 0.1% endotoxin-free recombinant human serum albumin (HSA).

Stability and Storage

Lyophilized proteins are stable for 1 year from the date of receipt if stored between (-20°C) and (-80°C). Upon reconstitution we recommend that the solution can be stored at (4°C) for short term or at (-20°C) to (-80°C) for long term. Repeated freeze thaw cycles should be avoided with reconstituted products.

Product Description

Recombinant Human Wnt3A is a member of the Wnt gene family that consists of structurally linked genes that encode secreted signaling proteins. These proteins are associated with oncogenesis and in numerous developmental processes. These processes include regulation of cell fate and patterning during embryogenesis. Human Wnt3A is a protein which shows 84% identity relative to other human Wnt3 proteins. Wnt3A plays a key role in maintaining the integrity of embryonic and adult tissues. The post-translational glycosylation and acylation of Wnts are essential for their efficient secretion and biological activity.

Synonyms

Wnt3A

The protein was resolved by SDS-polyacrylamide gel electrophoresis and the gel was stained with Coomassie blue. R represents reducing conditions and NR represents non-reducing conditions.
