

CREB1 Monoklonaler Antikörper

Katalog-Nr.: 67927-1-Ig 2 Publikationen

Allgemeine Informationen

Katalog-Nr.:	GenBank-Zugangsnummer:	Reinigungsmethode:
67927-1-Ig	BC010636	Protein-G-Reinigung
Größe:	GenID (NCBI):	CloneNo.:
150ul, Konzentration: 1000 µg/ml von 1385		1E11C1
Nanodrop;	Vollständiger Name:	Empfohlene Verdünnungen:
	cAMP responsive element binding protein 1	WB 1:5000-1:50000
Wirz:	Berechneté Masse:	IHC 1:1000-1:4000
Maus	341 aa, 35 kDa	IF 1:4000-1:16000
Isotyp:	Beobachteté Masse:	
IgG1	43-46 kDa	
Immunogen Katalognummer:		
AG2852		

Anwendungen

Geprüfte Anwendungen:	Positivkontrollen:
IF, IHC, WB, ELISA	WB : LNCaP-Zellen, HEK-293-Zellen, HeLa-Zellen, HepG2-Zellen, Jurkat-Zellen, K-562-Zellen, NIH/3T3-Zellen
In Publikationen genannte Anwendungen:	IHC : humanes Prostatakarzinomgewebe, humanes Zervixkarzinomgewebe
WB	IF : A431-Zellen,
Getestete Reaktivität:	
Human, Maus, Ratte	
Zitierte Arten:	
Human, Maus	
Hinweis-IHC: Antigendemaskierung mit TE-Puffer pH 9,0 empfohlen. (*) Wahlweise kann die Antigendemaskierung auch mit Citratpuffer pH 6,0 erfolgen.	

Hintergrundinformationen

CREB1, also named as CREB, belongs to the bZIP family, containing one bZIP domain and one KID (kinase-inducible) domain. This protein binds the cAMP response element (CRE), a sequence present in many viral and cellular promoters. CREB stimulates transcription on binding to the CRE. This protein is stimulated by phosphorylation. Phosphorylation of both Ser-133 and Ser-142 in the SCN regulates the activity of CREB and participates in circadian rhythm generation. Phosphorylation of Ser-133 allows CREBBP binding. Transcription activation is enhanced by the TORC coactivators which act independently of Ser-133 phosphorylation. CREB1 is sumoylated by SUMO1. Sumoylation on Lys-304, but not on Lys-285, is required for nuclear localization of this protein. Sumoylation is enhanced under hypoxia, promoting nuclear localization and stabilization. Defects in CREB1 may be a cause of angiomytoid fibrous histiocytoma (AFH), a distinct variant of malignant fibrous histiocytoma that typically occurs in children and adolescents and is manifest by nodular subcutaneous growth. A chromosomal aberration involving CREB1 is found in a patient with angiomytoid fibrous histiocytoma. Translocation (t;22)(q33;q12) with CREB1 generates a EWSR1/CREB1 fusion gene that is most common genetic abnormality in this tumor type. CREB1 exists some isoforms and range of calculated molecular weight of isoforms are 35-37 kDa and 25 kDa, but the modified CREB1 protein is about 43 kDa (PMID: 25883219).

Bemerkenswerte Veröffentlichungen

Verfasser	Pubmed ID	Journal	Anwendung

Lagerung

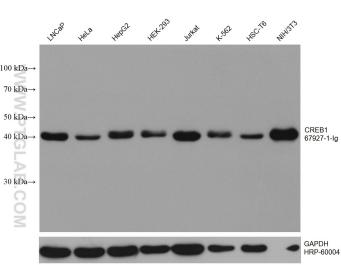

Lagerungsbedingungen:
Bei -20°C lagern. Nach dem Versand ein Jahr lang stabil
Lagerungspuffer:
PBS mit 0.02% Natriumazid und 50% Glycerin pH 7.3.
Aliquotieren ist nicht notwendig bei -20°C Lagerung

*** 20ul-Größen enthalten 0.1% BSA

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Ausgewählte Validierungsdaten

Various lysates were subjected to SDS PAGE followed by western blot with 67927-1-Ig (CREB1 antibody) at dilution of 1:20000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with HRP-conjugated GAPDH Monoclonal antibody (HRP-60004) as loading control.
