## Nur für Forschungszwecke

## ALCAM Monoklonaler Antikörper

Katalog-Nr.:CL405-65223

Allgemeine Informationen

Katalog-Nr.:

CL405-65223

Größe:

100 tests , 5  $\mu$ l/test Wirt:

Maus

Isotyp:

IgG1, kappa

105 kDa

molecule

BC057809

GeneID (NCBI):

Vollständiger Name:

Berechneté Masse:

GenBank-Zugangsnummer:

activated leukocyte cell adhesion

Reinigungsmethode:

Affinitätsreinigung

CloneNo.:

Anregungs-/Emissionsmaxima-

Wellenlängen: 399 nm / 422 nm

Anwendungen

Geprüfte Anwendungen:

Getestete Reaktivität:

Human

Hintergrundinformationen

Activated leukocyte cell adhesion molecule (ALCAM, also known as CD166) is a cell adhesion molecule that belongs to the immunoglobulin superfamily. It is involved in cell-cell adhesion through homophilic and heterophilic (to CD6) interactions. ALCAM is widely expressed in a variety of normal tissues and cell types, including activated T cells and monocytes, epithelial cells, fibroblasts, neuronal cells, hepatocytes, and bone marrow mesenchymal stem cells (PMID: 7760007; 25221999). Altered ALCAM expression has been associated with  $the \ differentiation \ state \ and \ progression \ in \ some \ neoplasms \ including \ melanoma, \ prostate, \ colorectal, \ and \ breast$ cancers (PMID: 20461761; 18172759).

Lagerung

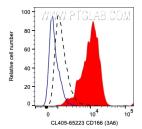

Lagerungsbedingungen:

Store at 2-8°C. Avoid exposure to light. Stable for one year after shipment.

Lagerungspuffer:

PBS with 0.09% sodium azide and 0.5% BSA.

## Ausgewählte Validierungsdaten

1X10^6 PHA-treated (day 3) human PBMCs were surface stained with 5 ul CoraLite® Plus 405 Anti-Human ALCAM (CL405-65223, Clone:3A6) (red), or unstained (blue). The black dashed line indicates unactivated PBMCs surface stained with 5ul CoraLite® Plus 405 Anti-Human ALCAM. Cells were not fixed. Monocytes were gated.
