## Hintergrundinformationen

Keratin 13 is a member of the keratin family. The keratins are intermediate filament proteins responsible for the structural integrity of epithelial cells and are subdivided into cytokeratins and hair keratins. Most of the type I cytokeratins consist of acidic proteins which are arranged in pairs of heterotypic keratin chains. This type I cytokeratin is paired with keratin 4 and expressed in the suprabasal layers of non-cornified stratified epithelia. Mutations in keratin 13 gene and keratin 4 have been associated with the autosomal dominant disorder White Sponge Nevus. The type I cytokeratins are clustered in a region of chromosome 17q21.2.

## Ausgewählte Validierungsdaten

1X10<sup>6</sup> A431 cells were intracellularly stained with 0.4 ug Coralite® Plus 488 Anti-Human Cytokeratin 13 (CL488-10164) (red), or 0.4 ug Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).

Immunofluorescent analysis of (-20°C Ethanol) fixed A431 cells using Coralite® Plus 488 Cytokeratin 13 antibody (CL488-10164) at dilution of 1:400.
