## Hintergrundinformationen

CD19 is a 95 kDa type I transmembrane glycoprotein belonging to the immunoglobulin superfamily (PMID: 2472450). It is expressed by B cells and follicular dendritic cells. CD19 is up-regulated at the step of B-lineage commitment during the differentiation of the hematopoietic stem cell, it remains on during subsequent stages of differentiation until finally down-regulated during terminal differentiation into plasma cells (PMID: 8528044). CD19 is involved in B cell development, activation and differentiation. It is the dominant component for the signaling complex on B cells that includes CD21 (CR2), CD81 (TAPA-1) and CD225 and acts as a critical co-receptor for BCR signal transduction (PMID: 23210908).

100 ul human peripheral blood were surface stained with APC Anti-Human CD3 (APC-65151, Clone: UCHT1) and 5.00 ul Coralite® Plus 488-conjugated Anti-Human CD19 (CL488-65145, Clone: SJ25C1). Lymphocytes were gated for analysis. Cells were not fixed.
