Hintergrundinformationen

Glucagon is a 29-amino acid peptide hormone secreted from the pancreatic alpha cells with a powerful stimulatory effect on hepatic glucose production acting to increase plasma glucose levels. Glucagon is best known as the counter-regulatory hormone to INS, and normal glucose homeostasis depends largely on the balanced secretion of INS and glucagon from the pancreatic beta and alpha cells, respectively. The regulation of glucose metabolism by glucagon is mediated by its direct action on the peripheral tissues such as the liver and also by the brain. Glucagon is also released postprandially in a transient manner, which was shown to be involved in inhibition of food intake via reduction of meal size.

Ausgewählte Validierungsdaten

Immunofluorescent analysis of (4% PFA) fixed mouse pancreas tissue using the CoraLite® Plus 488-conjugated version of this antibody, CL488-67286 (Glucagon antibody) and CL594-66198 (INS antibody), at dilution of 1:400. The B cells of the islets of Langerhans was labelled in red with CL594-66198(INS antibody).
