Hintergrundinformationen

Fibronectin 1 (FN1) is a high molecular weight glycoprotein which exists in both a soluble form in plasma (plasma FN1) and other body fluids and an insoluble form in the extracellular matrix (cellular FN1). Plasma FN1 (dimeric form) is secreted by hepatocytes. Cellular FN (dimeric or cross-linked multimeric forms), made by fibroblasts, epithelial and other cell types, is deposited as fibrils in the extracellular matrix. FN1 binds to cell surfaces through integrins and to various compounds including collagen, fibrin and heparin. It is involved in cell adhesion and migration processes including embryogenesis, wound healing, hemostasis, host defense, and metastasis. (PMID: 7276612; 12244123; 12847088)

Ausgewählte Validierungsdaten

Immunofluorescent analysis of (-20°C Methanol) fixed NIH/3T3 cells using Coralite@594 Fibronectin antibody (CL594-15613) at dilution of 1:200.

1X10⁶ NIH/3T3 cells were intracellularly stained with 0.4 ug Coralite@594 Anti-Human Fibronectin (CL594-15613) (red), or 0.4 ug Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
