Informations générales

The human suppressor of GCR two (hSGT1) was isolated by its ability to complement the growth defect of the *gcr2* mutant of *Saccharomyces cerevisiae*. Further work confirmed that the rescue of growth was associated with recovery of glycolytic enzyme activities of *gcr2*, and that hSGT1 did not complement the growth defect of a *gcr1* mutant. A hybrid protein comprising hSgt1p and the DNA-binding domain of Gal4p (GBD) activated a GAL1-lacZ reporter gene fusion, suggesting that the cloned gene may be a transcriptional activator. Two-hybrid experiments in yeast also indicate that hSgt1p interacts with Gcr1p. Northern analysis showed that hSGT1 is highly expressed in muscle and heart.
