Informations générales

Cdc (cell division control) family of proteins are regulatory proteins involved in the processes of cell cycle and proliferation. CDC37, migrated as a protein of 50 kDa in SDS PAGE, is a co-chaperone protein that recruits several immature client kinases to Hsp90 for proper folding. It functions in association with Hsp90, although little is known of its mechanism of action or where it fits into a folding pathway involving other Hsp90 cochaperones. CDC37 up-regulation is a common early event in some localized human cancers. But, the effect of CDC37 dysregulation in human cells is unclear.

Données de validation sélectionnées

HEK-293 cells were subjected to SDS PAGE followed by western blot with 10218-1-AP (CDC37 antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.

1X10⁶ MCF-7 cells were stained with 0.2ug CDC37 antibody (10218-1-AP, red) and control antibody (blue). Fixed with 90% MeOH blocked with 3% BSA (30 min). Alexa Fluor 488-conjugated AffiniPure Goat Anti-Rabbit IgG(H+L) with dilution 1:1000.

IP Result of anti-CDC37 (IP:10218-1-AP, 4ug; Detection:10218-1-AP 1:1000) with HEK-293 cells lysate 3200ug.
