Informations générales

Annexin A11 (Anxa11) is one member of annexins that are Ca²⁺-regulated phospholipid-binding proteins. Annexin A11 plays an important role in cell division, differentiation, apoptosis, vesicle trafficking and Ca²⁺ signaling. Annexin A11 dysregulation is involved in the progression, drug-resistance, recurrence of systemic autoimmune disease and cancer.

Données de validation sélectionnées

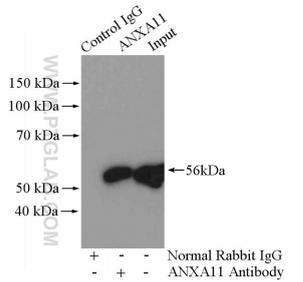

HeLa (WT and ANXA11 KO) lysates prepared with RIPA buffer, 50 µg protein loaded. 10479-2-AP incubated at 1:2000 at 4°C overnight in 5% milk in TBST. Ponceau stained transfers shown on right. Data provided by YCharOS, an open science company with a mission to validate commercial antibodies to improve scientific reproducibility and transparency.

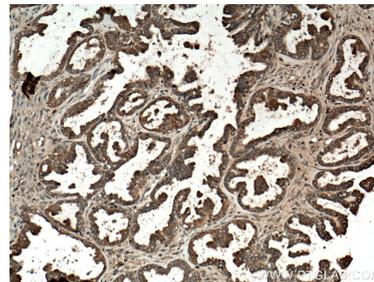

Various lysates were subjected to SDS PAGE followed by western blot with 10479-2-AP (Annexin A11 antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours.

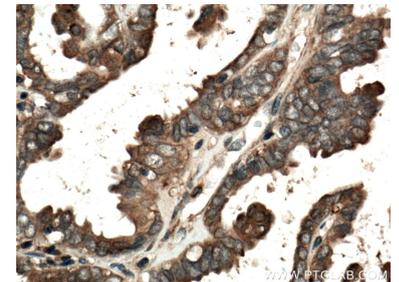

HeLa lysates prepared and IP of ANXA11 performed using 1.0 µg of 10479-2-AP coupled to protein A-Sepharose beads. The Ponceau stained transfers of each blot are shown. Data provided by YCharOS, an open science company with a mission to validate commercial antibodies to improve scientific reproducibility and transparency.
