Informations générales

HSD17B2(Estradiol 17-beta-dehydrogenase 2) is also named as 17-beta-HSD 2,20-alpha-HSD,EDH17B2 and belongs to the short-chain dehydrogenases/reductases (SDR) family.Based on the pivotal role of HSD17B2 gene product in the estrogen metabolism pathway, it may be considered as a putative candidate gene that could possibly explain a fraction of the remaining familial breast cancer risk and it is unlikely to play a role as a high penetrance gene in breast cancer predisposition(PMID:18372405).
