## Informations générales

GRIM19(Gene associated with retinoic and interferon-induced mortality 19 protein) is also named as NDUFA13, Cl-B16.6 and belongs to the complex I NDUFA13 subunit family.t GRIM-19 may distribute in the mitochondria and/or nucleus depending on the cell type.Alternatively, its cellular localization may be regulated by post-translational modifications such as phosphorylation and acetylation. Lastly, GRIM-19 may exist in different isoforms that may be distributed in distinct cellular locations(PMID:12628925).
