Informations générales

FEM1B, also named as F1AA, and KIAA0396, is a 627 amino acid protein, which belongs to the fem-1 family. FEM1B is highly expressed in testis and weakly expressed in other tissues. FEM1B localizes both in nucleus and cytoplasm. In the nucleus, the protein level increased slightly after camptothecin (CPT) treatment. FEM1B is a component of an E3 ubiquitin-protein ligase complex, in which it may act as a substrate recognition subunit. FEM1B is involved in apoptosis by acting as a death receptor-associated protein that mediates apoptosis. FEM1B is also involved in glucose homeostasis in pancreatic islet. FEM1B functions as an adapter/mediator in replication stress-induced signaling that leads to the activation of CHEK1. FEM1B exists two isoforms with MW 51,60 and 70 kDa.
