Informations générales

EIF1AY is 1 of 5 NRY genes that are expressed in many tissues and have homologs on the X chromosome, which is an essential translation initiation factor. EIF1AY seems to be required for maximal rate of protein biosynthesis, and enhances ribosome dissociation into subunits and stabilizes the binding of the initiator Met-tRNA(I) to 40 S ribosomal subunits. This is a rabbit polyclonal antibody raised against the full length of human EIF1AY, and can recognize both EIF1AY and EIF1AX.
