Informations générales

MYOZ2 gene encodes for the calcineurin-binding protein myozénin-2 (or Calsarcin-1) belonging to myozénin family. Defects in MYOZ2 gene are the cause of familial hypertrophic cardiomyopathy type 16 (CMH16), a hereditary heart disorder characterized by ventricular hypertrophy. The disorder has inter- and intrafamilial variability ranging from benign to malignant forms with high risk of cardiac failure and sudden cardiac death (PMID: 17347475). Myozénins may serve as intracellular binding proteins involved in linking Z line proteins such as alpha-actinin, and gamma-filamin. Important role in the modulation of calcineurin signaling and myofibrillogenesis of myozénin-2 have been elucidated (PMID: 11114196). Proteintech's Myozénin-2 antibody 11450-1-AP was raised against full-length protein of human origin and is able to detect band of approximate 34 kDa in Western blotting.

Données de validation sélectionnées

Various lysates were subjected to SDS PAGE followed by western blot with 11450-1-AP (Myozenin 2 antibody) at dilution of 1:6000 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffin-embedded human heart tissue slide using 11450-1-AP (Myozenin 2 antibody) at dilution of 1:200 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

Immunohistochemical analysis of paraffin-embedded human heart tissue slide using 11450-1-AP (Myozenin 2 antibody) at dilution of 1:200 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
