## Informations générales

RAB20 is a member of RAS oncogene family, it has no close relationship to any other members of RAB subfamily which consists of small GTP-binding proteins involved in the regulation of intracellular vesicular transport. Firstly found highly expressed on the apical side of kidney tubule epithelial cells, RAB20 was speculated to be involved in apical endocytosis and recycling processes. So far, its function is not well known, however, RAB20 is recently found higher expressed in pancreatic adenocarcinomas than normal pancreas, which is proved by WB and IHC analyses, suggesting its promising role in diagnosis of pancreatic carcinogenesis. Catalog#11616-1-AP is a rabbit polyclonal antibody raised against full-length of human RAB20.
