## Informations générales

Cellular nucleic acid binding protein (CNBP) has been implicated in vertebrate craniofacial development and in myotonic dystrophy type 2 (DM2) and sporadic inclusion body myositis (sIBM) human diseases [PMID:21277287]. CNBP is a small and strikingly conserved single-stranded nucleic acid binding protein that is able to bind DNA as well as RNA. This ssDNA- and RNA-binding protein with broad sequence specificity is participated in diverse cellular functions, including transcription, translation and through them cell proliferation and survival [PMID:20960530].
