Informations générales

NRF1, also named as Alpha-pal and NRF-1, belongs to the NRF1/Ewg family. It is a transcription factor that activates the expression of the EIF2S1 (EIF2-alpha) gene. NRF1 is implicated in the control of nuclear genes required for respiration, heme biosynthesis, and mitochondrial DNA transcription and replication. It plays a critical role in regulating the expression of many antioxidant response element (ARE)-dependent genes. NRF1 exists various isoforms and long isoform is about 67 kDa and short isoform is about 45 kDa.

Données de validation sélectionnées

Various lysates were subjected to SDS PAGE followed by western blot with 12482-1-AP (NRF1/nuclear respiratory factor 1 antibody) at dilution of 1:1500 incubated at room temperature for 1.5 hours.
