## Informations générales

The OPRL1 (opioid related nociceptin receptor 1) is the G-protein coupled receptor activated by the endogenous NC (neuropeptide nociceptin) (PMID:7566152). OPRL1 is widely expressed in the central nervous system, including the hippocampal dentate gyrus, cortical areas, striatum, thalamus, and hypothalamus (PMID:19501074). OPRL1 has been found to play an essential role in cognition, and to modulate inflammation and immune responses (PMID:30152845).
