Informations générales

SLC22A2, also named as OCT2, belongs to the major facilitator (TC 2.A.1) superfamily and Organic cation transporter (TC 2.A.1.19) family. The SLC22A2 gene encodes for the organic cation transporter 2 (OCT2) protein which acts as a renal uptake transporter. Human OCT2 (hOCT2) is expressed on the basolateral side of the proximal tubule cells and plays a crucial role in the disposition and renal clearance of cationic drugs and endogenous compounds (PMID: 35143948). SLC22A2 has 3 isoforms with the molecular mass of 27, 54 and 63 kDa. Sometimes higher molecular weight around 70 kDa can also be observed, which may be a modified variant of SLC22A2.
