Informations générales

LSAMP, also known as LAMP, is a 64-68 kDa heavily glycosylated neural cell adhesion molecule expressed on the neuronal dendrites and somata (PMID: 1688937; 8666243). LSAMP is a member of the IgLON family. The amino acid sequence of LSAMP is highly conserved among species. Human LSAMP shares 99% amino acid sequence identity with rodent LSAMP. The impact of LSAMP protein on neurite outgrowth and neuronal connectivity has been established in a wide spectrum of psychiatric disorders in humans (PMID: 26136648). In mice, lack of LSAMP protein seemingly leads to a deterioration in the ability to adapt to novel stressful environments and stimuli (PMID: 22155487).
