Informations générales

USP16 (Ubiquitin specific peptidase 16) is originally identified as a DUB of histone H2A which is implicated in cell cycle progression and HOXD10 gene expression (PMID:17914355). Knock out study has reported that depletion of USP16 results in early embryonic lethality in mice (PMID:24784029). Moreover, USP16 mediated deubiquitination and stabilization of Drp1 through its direct interaction with Drp1 (PMID:37488647).
