Informations générales

Exoc3 (Sec6) is a component of the exocyst (Sec6/8) complex involved in vesicle trafficking at neural synapses and vesicle targeting in polarized epithelial cells. Though best characterized in yeast, the component proteins and functions of exocyst complex have been demonstrated to be highly conserved in higher eukaryotes. This complex is composed of eight proteins (Sec3, Sec5, Sec6, Sec8, Sec10, and Sec15, Exo70 and Exo84), with molecular weights ranging from 70 to 144 kDa.
