Informations générales

Angiotensin-like protein (Angptl) 1, also known as angiotensin-related protein 1 (ARP1) and angioarrestin, belongs to the angiotensin-like family of proteins (Angptls). It is a secretory glycoprotein that shares two basic structural motifs with the angiotensin family: an N-terminal coiled-coil domain and a C-terminal fibrinogen-like domain. Angptl1 is widely expressed in adult tissues with mRNA levels highest in highly vascularized tissues. It is related to development of the connective tissue and cartilage. This protein was found to be a secretory protein that does not act as an endothelial cell mitogen in vitro.
