## Informations générales

Conjugation of Nedd8 to a cullin protein, termed neddylation, is an evolutionarily conserved process that functions to activate the cullin-RING family E3 ubiquitin ligases, leading to increased proteasomal degradation of a wide range of substrate proteins. Cellular neddylation requires the action of DCN1 (Defective in cullin neddylation protein 1), which, in humans, consists of five homologues designated as DCN1-5. DCUN1D5 gene encodes the 28 kDa DCUN1 domain-containing protein 5 containing a C-terminal potentiating neddylation domain. The cellular function of DCUN1D5 needs to be explored, recently, a mono-ubiquitination-mediated mechanism that governs nuclear-cytoplasmic trafficking of hDCN1, was reported to regulate hDCN1-dependent activation of the cullin-RING E3 ubiquitin ligases in selected cellular compartments.

## Données de validation sélectionnées

HeLa cells were subjected to SDS PAGE followed by western blot with 14810-1-AP (DCUN1D5 antibody) at dilution of 1:500 incubated at room temperature for 1.5 hours.

IP Result of anti-DCUN1D5 (IP:14810-1-AP, 3ug; Detection:14810-1-AP 1:800) with HeLa cells lysate 1840ug.

Immunofluorescent analysis of (10% Formaldehyde) fixed HeLa cells using 14810-1-AP (DCUN1D5 antibody) at dilution of 1:50 and Alexa Fluor 488-conjugated AffiniPure Goat Anti-Rabbit IgG(H+L).
