## Informations générales

CRISP3, also known as SGP28, is a glycoprotein that belongs to a family of cysteine-rich secretory proteins (CRISPs). CRISP3 was originally discovered in human neutrophils, but transcripts are widely distributed in exocrine glands (salivary glands, pancreas, and prostate) and also found at lower levels in epididymis, ovary, thymus, and colon. CRISP3 is a potential biomarker for prostate cancer. This antibody can recognize human CRISP3 only.
