Informations générales

Glutathione-S-transferase omega 1 (GSTO1) belongs to a new subfamily of GSTs and is the rate limiting enzyme for biotransformation of inorganic arsenic, environmental carcinogen. Expression of GSTO1-1 was abundant in a wide range of normal tissues, particularly liver, macrophages, glial cells, and endocrine cells. Human GSTO1 assembles as a dimer. This antibody detects both monomer (27-30 kDa) and dimer forms of GSTO1 (54-64 kDa). (PMID: 21495794)
