Informations générales

ATP1B1 is one of beta subunits of the Na⁺/K⁺ ATPase and responsible for formation and structural integrity of the Na⁺/K⁺ ATPase. The Na⁺/K⁺ ATPase is a plasma membrane pump consisting of alpha, beta, and gamma subunits. At least four of Na⁺/K⁺-ATPase beta subunits (β1, β2, β3, β4) have been identified in mammalian cells; the β1-subunit (ATP1B1) is the most ubiquitous. The Na⁺/K⁺ ATPase β subunits have multiple N-glycosylation sites. The predicted MW of ATP1B1 is 35 kDa, while it migrates around 40-52 kDa due to the variable glycosylation.
