## Informations générales

DHRS4 (Dehydrogenase/reductase SDR family member 4) is also named as PHCR, NRDR, PSCD, SCAD-SRL, and belongs to the short-chain dehydrogenases/reductases (SDR) family. It can also catalyze the oxidation of all-trans-retinol with NADP as co-factor, but with much lower efficiency. Human DHRS4 is a tetramer composed of 27 kDa subunits, which is inactivated at low temperature without dissociation into subunits (PMID:18571493).
