Informations générales

PDK2([Pyruvate dehydrogenase (acetyl-transferring)] kinase isozyme 2, mitochondrial) is also named as PDHK2 and belongs to the PDK/BCKDK protein kinase family. PDK2 plays a key role in the regulation of glucose and fatty acid metabolism and homeostasis via phosphorylation of the pyruvate dehydrogenase subunits PDHA1 and PDHA2. PDK2 is also involved in the regulation of cell proliferation and in resistance to apoptosis under oxidative stress. This protein has 2 isoforms produced by alternative splicing.
